## Question 1

Correct

Mark 1.00 out of 1.00

**Problem Statement:**

Given a sorted array of integers say arr[] and a number x. Write a recursive program using divide and conquer strategy to check if there exist two elements in the array whose sum = x. If there exist such two elements then return the numbers, otherwise print as "No".

Note: Write a Divide and Conquer Solution

**Input Format**

First Line Contains Integer n – Size of array

Next n lines Contains n numbers – Elements of an array

Last Line Contains Integer x – Sum Value

**Output Format**

First Line Contains Integer – Element1

Second Line Contains Integer – Element2 (Element 1 and Elements 2 together sums to value "x")

**Answer:** (penalty regime: 0 %)

```

1  #include <stdio.h>
2  void Sum(int arr[],int l,int r,int x) {
3  while (l < r) {
4      int sum = arr[l] + arr[r];
5      if (sum == x) {
6          printf("%d\n", arr[l]);
7          printf("%d\n", arr[r]);
8          return;
9      }
10     if (sum < x) {
11         l++;
12     } else
13         r--;
14     }
15     printf("No");
16 }
17 int main()
18 {
19     int n;
20     scanf("%d", &n);
21     int arr[n];
22     for (int i = 0; i < n; i++) {
23         scanf("%d", &arr[i]);
24     }
25     int x;
26     scanf("%d", &x);
27     Sum(arr,0,n-1,x);
28     return 0;
29 }
```

	Input	Expected	Got	
✓	4 2 4 8 10 14	4 10	4 10	✓

	Input	Expected	Got	
✓	5 2 4 6 8 10 100	No	No	✓

Passed all tests! ✓

Correct

Marks for this submission: 1.00/1.00.
